PE/PG/PN/PB
SERIES

Planetary Gearboxes

PE/PG/PN/PB Series

Characteristic Highlights

One piece planet carrier and planet gearing is supported on both sides. Provide maximum radial load capacity and increase system reliability and stiffness.

Equipped with **solid uncaged needle roller bearings**, provides maximum contact points to increase stiffness and generates high output torque. Our **in-house plasma nitriding** heat treatment process maintains the tooth surface hardness at **840Hv** for superior wear-resistance and a core hardness at **30 HRc** for toughness.

A high setting gear performance is achieved by using our **HeliTopo technology**. This **eases off the tooth profile and crowns the lead of each tooth**. This optimizes the gear mesh alignment and overlap to achieve maximum tooth surface contact.

Permitted Radial and Axial Loads on Output Shaft of the Gearbox

The permitted radial and axial loads on output shaft of the gearbox depend on the design of the gearbox supporting bearings.

If radial force F_{2r} is not exerted on the center of the output shaft $X < 1/2xL$ or $X > 1/2xL$. The permitted radial and axial loads can be calculated by the position load factor K_b on the above diagram.

If radial force F_{2r} exert on the center of the output shaft $X = 1/2xL$. Under various operating condition the lifetime is over 20,000* hours. The permitted radial load is given on the above diagram.

*Continuous operation reduces service life by 50%
